Round 2 ~ Task Sheet

Language Task 1 — Student Marks Analyzer

Using C++ create a program that accepts marks for multiple students and calculates the average, highest mark, lowest mark, and number of passed and failed students.

C++ Program: Student Marks Analyzer

```
1 #include <iostream>
2 using namespace std;
3
4 int main()
5 {
6     int n;
7     float marks, sum = 0, average;
8     float highest, lowest;
9     int passed = 0, failed = 0;
10
11     cout << "Enter number of students: ";
12     cin >> n;
13
14     if (n <= 0) {
15         cout << "Invalid number of students." << endl;
16         return 0;
17     }
18
19     cout << "Enter marks of " << n << " students:\n";
20
21     for (int i = 1; i <= n; i++)
22     {
23         cout << "Student " << i << ": ";
24         cin >> marks;
25
26         sum += marks;
27
28         if (i == 1) {
29             highest = lowest = marks;
30         }
```

```
31     else {
32         if (marks > highest)
33             highest = marks;
34
35         if (marks < lowest)
36             lowest = marks;
37     }
38
39     // Assuming 40 marks is the passing mark
40     if (marks >= 40)
41         passed++;
42     else
43         failed++;
44 }
45
46 average = sum / n;
47
48 cout << "\n— Student Marks Analysis —\n";
49 cout << "Average Marks : " << average << endl;
50 cout << "Highest Marks : " << highest << endl;
51 cout << "Lowest Marks : " << lowest << endl;
52 cout << "Passed Students: " << passed << endl;
53 cout << "Failed Students: " << failed << endl;
54
55 return 0;
56 }
```

OUTPUT:-

```
Enter number of students: 5
Enter marks of student 1: 85
Enter marks of student 2: 72
Enter marks of student 3: 35
Enter marks of student 4: 90
Enter marks of student 5: 48

----- Student Marks Analysis -----
Average Marks   : 66
Highest Marks   : 90
Lowest Marks    : 35
Passed Students: 4
Failed Students: 1

[Program finished]
```
